Date: 9/16/2020
Subject: Evaluation of the Pre-Calculus Pathway - Success and Throughput Rates

## Purpose

This analysis is provided as an update on the success and throughput rates for courses in the PreCalculus pathway which includes MATH41 as a standalone course, MATH41 + MPS, MATH41 + MATH231 (corequisite), and MATH30 the pre-calculus preparation course, and MATH115 (intermediate algebra, degree-applicable but non-transferable) as well as the few sections of MATH210 and MATH212 still offered. AB 705 states that colleges have two years to pilot curriculum that places students into pre-transfer level courses. The 2019-20 academic year completed the first year of the two-year process. Throughput rates are calculated based on students who started in fall 2019 and tracked through winter, spring and summer. Under AB 705, students are given one academic year to complete the transfer level or degree applicable course and the clock starts at first enrollment in the sequence. This analysis tracks students who have no prior math enrollment and tracks their initial course enrollment through the transfer level course or degree applicable course based on their educational goal. Students who started in MATH41 are tracked to successful completion of MATH41. Students who started in MATH130, 114, 210 or 212 with an educational goal of transfer are tracked to successful completion of MATH41, 42, 43, 1A-1C, 2A2B.

It should be noted that online spring has impacted outcomes for students in that students largely took an excused withdrawal rather than a standard withdrawal for spring 2020. For this reason, the EW grades were included in this analysis to ensure consistency across terms in regards to withdraws and how they are calculated within the success rate. A full analysis of EW grades and their impact on success rates in spring 2020 is available here.

## AB 705 Context

AB 705 (Irwin), Title 5, § 55003 and 55522 requires California Community Colleges' placement methods to be designed to maximize the probability that students will enter and complete transferlevel coursework in English and mathematics (or quantitative reasoning) within one year. Colleges are required to evaluate the following scenarios:

1. Students enroll in a pre-transfer level course with an educational goal of transfer;
2. 2. Students enroll in a pre-degree-level course with an educational goal of degree; or
1. 3. Students enroll in a pre-degree-level course with an educational goal of certificate that requires transfer level English or degree-applicable math; or
1. 4. Students with a transfer or degree goal enroll in a multi-term sequence in which they take either (1) a pre-transfer-level course in one term and a transfer-level course in a following term or (2) a transfer-level course stretched over two terms (e.g. stretch curriculum).

## Summary of Findings

- Students who started in MATH41 in fall 2019 and passed by summer 2020 resulted in a four-term throughput rate of $71 \%$.
- Non-MPS sections had a throughput rate of $76 \%$
- MPS sections of MATH41 had throughput rate of 65\%
- MATH41 + MATH231 (corequisite) had throughput rate of $64 \%$
- Students with an educational goal of transfer who started in a pre-transfer level course in the pre-calculus pathway had throughput rates of:
- 33\% for MATH130;
- 16\% for MATH114;
- $6 \%$ for MATH210; and
- $15 \%$ for MATH212.
- Students with an educational goal of degree who started in a pre-transfer level course in the pre-calculus pathway had throughput rates of:
- $22 \%$ for MATH130;
- 9\% for MATH114;
- 0\% for MATH210; and
- $0 \%$ for MATH212.
- At this time, with the current sample sizes and the impacts of COVID-19 on instruction, MATH130, MATH114, MATH210 and MATH212 are not meeting the intended purpose under title 5, § 55003.d.3. However, the law permits colleges to pilot pre-transfer level curriculum for two years. Students in the pre-transfer level courses should be exhibiting throughput rates at or above those of students in the corequisite or standalone course.
- The Calculus and Pre-calculus sequence strongly over represents the Asian student population while substantially underrepresenting the Latinx, Filipinx and African American student populations. While enrollment in basic skills courses including MATH114, 130, 210 and 212 is low, and lower than in prior years, it is still over enrolled by our most underserved student populations.

Table 1. Pre-Calculus Pathway Throughput Rates

|  | Fall 2019 |  |  | Winter 2020 |  |  |  | Spring 2020 |  |  |  | Summer 2020 |  |  |  |

| MATH2 10 | 34 | 18 | 53\% |  |  |  | 0\% | 2 | 2 | 100\% | 6\% |  |  |  | 6\% |
| MATH2I2 | 34 | 18 | 53\% | I | I | 100\% | 3\% | 6 | 4 | 67\% | 15\% |  |  |  | 15\% |
| Degree Applicable or Transfer-Level Completion |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| MATHI30 | 9 | 4 | 44\% | 3 | 2 | 67\% | 22\% |  |  |  | 22\% |  |  |  | 22\% |
| MATHII4 | 34 | 22 | 65\% | I | I | 100\% | 3\% | 2 | 2 | 100\% | 9\% |  |  |  | 9\% |
| MATH2 10 | 7 | 2 | 29\% |  |  |  |  |  |  |  | 0\% |  |  |  | 0\% |
| MATH2I2 | 8 | 4 | 50\% |  |  |  |  |  |  |  | 0\% |  |  |  | 0\% |

Note: Includes students with no prior math enrollment. Transfer level completion for MATH41 and MATH41 + 231 includes students with any educational goal as their course taking
behavior indicates a transfer goal intention by enrolling in a transfer level course. Transfer level completion for the MATH41 includes students with any educational goal as their behavior indicates a transfer goal intention by enrolling in a transfer level course and tracked to completion of MATH41. Transfer level completion for MATH130, MATH114, MATH210 or MATH212 includes students with an educational goal of transfer tracked to completion of MATH1A, 1B, 1C, 1D, 1AH, 1BH, 1CH, 1DH, 2A, 2B, 2AH, 2BH, D041, 42, 43. Degree applicable completion includes students with a degree educational goal who completed a degree-applicable or transfer-level course in the pre-calculus pathway.

Table 1 displays the two, three and four-term throughput rates for the different pre-calculus pathways. Students who enrolled in a math class for the first time in fall 2019 are tracked to successful completion (A, B, C, P) of the transfer level or degree applicable (MATH114) course by winter and spring 2020.

- Students who started in MATH41 in fall 2019 and passed by summer 2020 resulted in a four-term throughput rate of 71\%.
- MPS sections of MATH41 had throughput rate of $65 \%$ compared to $76 \%$ for non-MPS sections.Students who started in MATH41 + MATH231 (corequisite) and passed any MATH41 course by summer 2020 resulted in a four-term throughput rate of $64 \%$.
- Students with an educational goal of transfer who started in fall 2019 and passed a transfer level math course in the pre-calculus pathway by summer 2020 resulted in a four-term throughput rate of:
- 33\% for MATH130;
- $16 \%$ for MATH114;
- 6\% for MATH210; and
- $15 \%$ for MATH212.
- Students with an educational goal of degree who started in fall 2019 and passed MATH114 by summer 2020 resulted in a four-term throughput rate of:
- 22\% for MATH130;
- 9\% for MATH114;
- $0 \%$ for MATH210; and
- 0\% for MATH212.
- At this time, with the current sample sizes and the impacts of COVID-19 on instruction, MATH130, MATH114, MATH210 and MATH212 are not meeting the intended purpose under title 5, §55003.d.3. However, the law permits colleges to pilot pre-transfer level curriculum for two years. Students in the pre-transfer level courses should be exhibiting throughput rates at or above those of students in the corequisite or standalone course.
- The two-year timeframe can allow for larger sample sizes for comparison over time. If these rates are not met within two years, title 5 states: The Chancellor may order the district to relinquish the district method and adopt a method published by the Chancellor's Office under any of the following circumstances: the district's failure to demonstrate that the local method meets or exceeds the throughput rate of a method published by the Chancellor's Office.

Table 2. Pre-Calculus Pathway Throughput Rates by High School GPA Band

|  | MATH2I2 | 34 | 18 | 53\% | I | 1 | 100\% | 3\% | 6 | 4 | 67\% | 15\% |  |  |  |  |

Note: Includes students with no prior math enrollment. Transfer level completion for MATH41 and MATH41 + 230x includes students with any educational goal as their course taking behavior indicates a transfer goal intention by enrolling in a transfer level course. Transfer level completion for the MATH41 includes students with any educational goal as their behavior indicates a transfer goal intention by enrolling in a transfer level course and tracked to completion of MATH41. Transfer level completion for MATH130, MATH114, MATH210 or MATH212 includes students with an educational goal of transfer tracked to completion of MATH1A,
$1 \mathrm{~B}, 1 \mathrm{C}, 1 \mathrm{D}, 1 \mathrm{AH}, 1 \mathrm{BH}, 1 \mathrm{CH}, 1 \mathrm{DH}, 2 \mathrm{~A}, 2 \mathrm{~B}, 2 \mathrm{AH}, 2 \mathrm{BH}, \mathrm{D} 041,42,43$. Degree applicable completion includes students with a degree educational goal who completed MATH114. High school GPA data was not
available for $10 \%$ students in MATH41 standalone, $8 \%$ of students in MATH41 MPS, $4 \%$ for students in MATH42 +231x, 13\% of students in MATH130, $18 \%$ of students in MATH210 and $100 \%$ of students in
MATH212. GPA is obtained from official transcripts first, then supplemented by self-reported if available.

Table 2 above displays the two, three and four-term throughput rates for the different pre-calculus pathways by high school GPA band. Students who enrolled in a math class for the first time in fall 2019 are tracked to successful completion (A, B, C, P) of the transfer level or degree applicable course by winter, spring and summer 2020.

Legend: Salmon color represents underrepresentation of the group based on their enrollment in the course compared to the overall enrollment on campus in the same term. Blue indicates an overrepresentation in enrollment.

Table 4 displays the total percent of each racial/ethnic group in each term followed by their proportion of enrollment in each Math course in the calculus pathway. The data is displayed graphically below in Graph 1.

## Chart 1. Calculus Pathway Enrollment by Race/Ethnicity - 2019-20

As displayed above in Table 4 and Chart 1, Asian student enrollment in the calculus sequence is highest in the Calculus 1A-1D series, which is where Latinx, Filipinx and African American students have the lowest rates of enrollment. Asian enrollment is the lowest in pre-transfer level courses including MATH130 and MATH210, which is where Latinx and African American students have the highest enrollment. The Calculus sequence strongly over represents the Asian student population while substantially underrepresenting the Latinx, Filipinx and African American student populations. While enrollment in basic skills courses including MATH114, 130, 210 and 212 is low, and lower than in prior years, it is still over enrolled by our most underserved student populations which impacts their ability to complete a transfer level course when factoring attrition through a sequence.
